

P20 Council Early Childhood Data Subcommittee Minutes
December 19, 2013

Subcommittee Members Present: John Laznik, Susan Campbell, Tony Ruggiero

1. Introductions

2. Early Childhood Workforce Study

- a. Tony Ruggiero, from the Department of Education's Early Development & Learning Resources work group presented the Part B 619 Child Outcome Summary Data.
- b. This study was prompted by the number of targets met for school years 2010, 2011, and 2012. One target was met in SY2010, three were met in SY2011, and none were met in SY2012.
- c. Some findings from the study:
 - i. There was a distribution shift of the child outcome population by special education category. Notable differences were with the autistic, developmentally delayed, and speech children.
 - ii. All selected subgroups met targets throughout the three years examined except for children with autism. Children with developmental delays and speech delays had highest outcomes. Children with autism had the lowest.
 - iii. Excluding children with autism from the analysis had very little impact when it came to achieving targets for school year 2013.
 - iv. Child outcome data quality has become better due to professional development, trainings, and the district review process.
